TECHNOLOGY & SECURITY
**WORK TOGETHER**

# APPLYING THE
## LATEST TECHNOLOGY

Throughout past decades the security industry has struggled in dealing with a number of security management issues. Among these issues include poor security networking, primitive screening processes and inefficient data retrieval. The industry has suffered from disorganisation through cluttered paper documents and lack of established protocol. Furthermore, the world itself has witnessed an undeniable increase in security threats and breaches on government entities and organisations. With the occurrence of recent events, society has undoubtedly experienced one of the most hectic decades in history.
